Why SharePoint Is Slowing Down Your Team

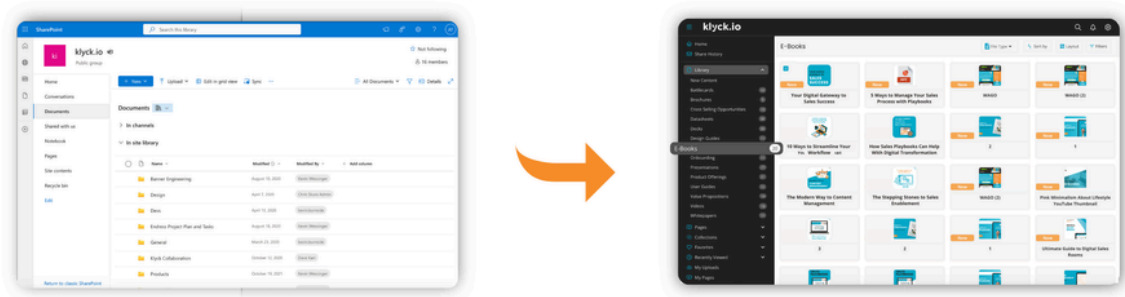

(And What To Do Instead)

A Practical Guide
to Leaving Complexity Behind

Still Relying on SharePoint for Document Management?

You're not alone, but chances are, it's starting to feel more like a roadblock than a solution.

In this short guide, we unpack why SharePoint doesn't always meet the mark for mid-sized teams, and how modern alternatives like Klyck can help your team move faster, collaborate easier, and stay compliant.

The Cold Truth

Folder-based systems like SharePoint often create more complexity than clarity. As your content grows, navigating through deeply nested folders or guessing where a file might live becomes a daily time sink, and time lost is money lost.

Modern teams need a content structure that's both flexible and tailored to how they work. Whether it's advanced search, AI-powered recommendations, or favoriting frequently-used materials, teams deserve multiple ways to instantly access what they need. SharePoint often slows this down, overcomplicating your organization and pulling valuable focus away from the work that actually moves the needle.

The Hidden Costs of Sticking with SharePoint

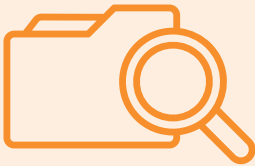

- **Content Chaos:** Files scattered across sites, subsites, folders, and personal drives.
- **Access Issues:** Complex permissions that are hard to manage—and even harder to troubleshoot.
- **Limited Visibility:** No way to see who's using what, when, or how effectively.
- **Collaboration Barriers:** Version conflicts, clunky external sharing, and disconnected communication tools.

Checklist: Signs You've Outgrown SharePoint

- Team constantly asks "Where is this file?"
- Files live outside SharePoint (in emails, drives, desktops)
- You struggle to control who has access to what
- Compliance or audit-readiness is a manual nightmare
- You're spending more time organizing than executing

What Modern Teams Want (and Need)

A central, searchable repository with built-in structure.

Simple user access control and secure sharing.

Workflow automation for document approvals and routing.

Real-time collaboration (without version confusion).

Compliance reporting and audit trails.

Easy onboarding for new users.

While platforms like SharePoint offer a basic foundation for file access and storage, modern businesses need more than just a place to find documents, they need a system that keeps people aligned and workflows running smoothly.

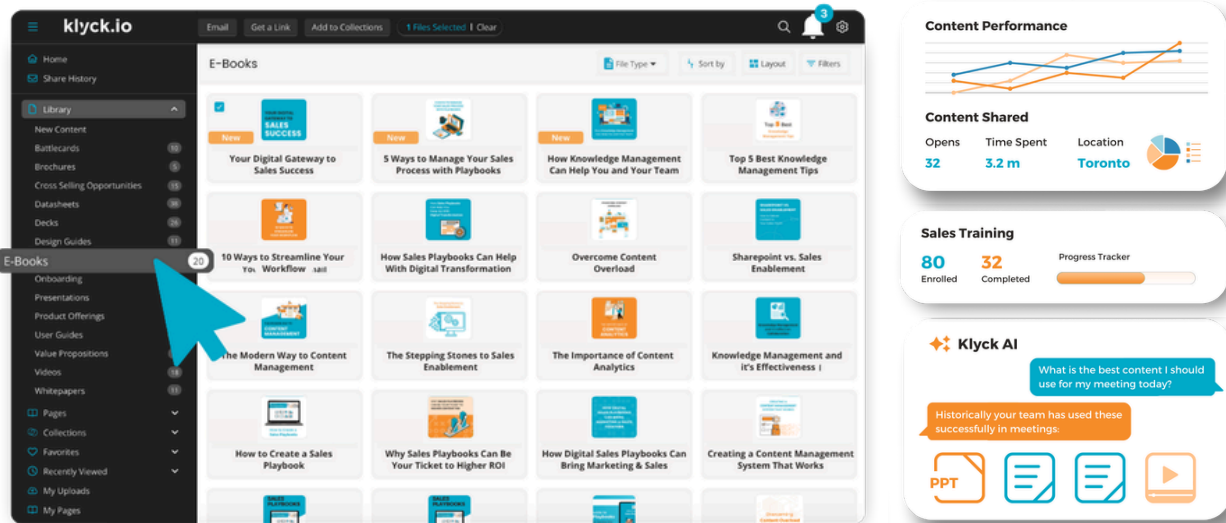

Klyck not only mirrors the core functionality of SharePoint, but goes further by enabling powerful workflows and automation. Whether it's routing documents for approval, publishing updates, or distributing key content to the right teams, Klyck helps ensure that nothing falls through the cracks.

With automated reminders, process tracking, and smart notifications, Klyck keeps your people informed, connected, and focused, so your business keeps moving in the right direction.

How Klyck Replaces and Outperforms SharePoint

Klyck is built for teams who need structure, speed, and scale, without the SharePoint sprawl.

- ✔ Drag-and-Drop Content Libraries
- ✔ Automated Workflows
- ✔ Smart Filters and Tagging
- ✔ Real-Time Visibility and Dashboards
- ✔ User Access Controls
- ✔ Built-in Audit Tracking and Compliance Support

Let's explore what a simpler, faster content hub looks like for your team.
